TREATMENT HISTORY [First Diagnosis](#) | [Standard Treatment](#) | [Issels Treatment](#)
[First Diagnosis](#)

February 1955

Diagnosis: Soft Tissue Sarcomas in both Thighs.

Histology: Large-cellular round-cell Sarcoma; high degree of malignancy. It appears that there exists already a generalized Sarcomatosis.

Treatment: Surgical removal of both Sarcomas.

No radiation, no chemotherapy.

Standard / Conventional Treatment

September 1955

First Metastatic Recurrence at the left shank (lower leg). Generalized Sarcomatosis suspected.

Treatment: **Unsuccessful chemotherapy, no surgery nor radiation.**

Issels Treatment

October 1955 to 1956

Issels Treatment: 13 weeks of in-patient immunobiological Issels Jan.

Treatment with 6 months of out-patient follow-up.

Issels Immuno-Oncology

March 1956

Remission

October 1956

No recurrence

July 1957

Second Metastatic Recurrence at the left shank.

No Standard Treatment. Patient considered incurable.

August to September 1957

Issels Treatment: 4 weeks of in-patient and 6 months of out-patient Immunobiological Issels Treatment.

Mid-1958

Complete Remission.

Follow-up until 1971

13 years cancer free without any further recurrence, patient leading a normal healthy life, fully fit for work.

DISCLAIMER: No claim is made that patients with similar diagnosis and/or treatment(s) will respond to the same extent as the patients shown. All testimonials have been provided voluntarily to share a patient's experience with the Issels Treatment and their state of health at the time. Some patients may have passed away due to age or disease. None of these patients received compensation or are related to the Issels Treatment Centers.
